

U.S. Consumer Product Safety Commission

Log of Meeting

Subject: ASTM Stationary Activity Center Task Group Meeting

Date of Meeting: December 5, 2018

Location: Teleconference

Log Entry Source: Kevin Lee

Date of Log Entry: February 15, 2019

Attendees: Contact ASTM for the list of attendees

Summary of Meeting:

The task group discussed requirements to prevent fraying straps on stationary activity centers (SAC).

The task group proposed to give an option to perform a life cycle test (25 lbs, 120,000 cycles) or to include a redundant strap which would encapsulate the entire system with a separate anchoring point. The static load test of 90 lbs. would be done to the redundant system as well.

The next step is to share this proposal with the subcommittee. is proposal should be proposed to the subcommittee by December 26th 2018.
